

Countries bordering mountains who depend on the runoff to feed their streams will become desperate for water when the icecaps melt. These countries include Iraq/Iran, India/Pakistan, Ethiopia/Somalia, and even parts of the US and Canada. **ONE PARCHED PARROT rasps** that potable water can be pulled out of the air to protect humans, livestock, nature, and potable water is accumulative and recyclable. **THE OTHER PARROT sips** that this is, yet again, fear-mongering, There are other solutions like desalinization, harvesting humidity, and free trade. Hydrogen (H) planes could emit potable mist equivalent to two Lake Tahoe's per year.

Should long haul air travel use green hydrogen to democratize water?

Key "YES" Reasons because...	Shaded roles are a majority against the idea, the key reason is noted for both Yes & No																Key "NO" Reasons because...
